To be successful in today’s highly competitive pavement marking industry, you need an edge over the competition.

Dickson truck mounted grinders and saws can provide that competitive edge by offering equipment that delivers unmatched power and performance, built with the understanding that you need maximum up time under all conditions and an operator friendly environment that helps you achieve that goal.

In production since 1985, the Road Pro product line is a proven high production performer when it comes to specialized surface preparation.

Road Pro TMG 6275

John Deere charge air cooled interim tier 4 diesel engine producing 275 horsepower.

High capacity dust collection system for near 100% debris and dust recovery.

Hydraulically driven tool heads.

Full floatation tooling that automatically follows the road contours.

Dual operator stations with full tool controls.

Peterbilt 320 chassis rated at 66,000 GVW.
Four exceptionally rugged tool housings are fabricated from heavy abrasion resistant alloy steel. Tool housings will accept 19” diameter flail grinding drums or 20” diameter diamond drum assemblies. Digital cut depth indicator allows operator to maintain precise cutting depths. Full floatation heads always follow the road contour and provide continuous and easily controlled grinding and grooving depths. Computer controlled tooling allows for on the move quick change adjustments. 8” heavy duty vacuum hose.

The high capacity dust collector features automated reverse air pulse cleaning of the 32 cartridge dust filters. The large, full width dump door provides quick debris removal. A dust level indicator monitors the debris level and signals the operator. The air exhaust from the collector is diverted to the road surface directly behind rear tires providing a clean and clear path for striping or inlay work. Dust collector filters are easily accessible from large side doors. Interior of dust collector is accessible from large rear door. The operator cab and dust collector body are integrated. Dual air operated bin vibrators aid in dust and debris removal.

Dickson Industries has been a world leader in the design and manufacture of specialized surface preparation equipment since 1981. Please view our website for a complete product line.
